

## Written transcript

*Speaker voice:* We make it happen!

We handle approximately 760 000 flights to, from, and through Swedish airspace every year.

Whether you are a pilot or a passenger, our mission is to guide your flight safely and efficiently.

We are LFV.

As a state-owned enterprise, we have been using our air navigation expertise to make Swedish airspace as efficient and sustainable as possible since 1947. We provide solutions for both civil and military aviation throughout Sweden, and offer air traffic control services internationally.

We design Swedish airspace, creating the aeronautical data and charts that make it possible for everyone to use the skies effectively. Through collaborations and partnerships, we develop new and innovative work methods, systems and processes, which enable us to guide flights along the shortest possible distance between departure and destination - an eco-friendly way of conducting air traffic control.

Of course, there's more to air traffic control than just being eco-friendly.

Guiding flights starts on the ground. From the moment an airplane starts to taxi until the moment it leaves Swedish airspace, the main focus of our skilled and motivated air traffic controllers is flight safety. Our nationwide network of towers and control centers keeps a watchful eye on Sweden's skies, making sure every flight is on course and well informed.

We are experts and this is what we do.

Our engineers manage the systems that make this possible, and work together with our specialists to ensure that those systems are ready to meet the increasing demands on today's airspace as well as the demands of the future. For example, we are upgrading our radar towers to accommodate the latest digital 3D radar imaging technology.

In April 2015, LFV was first in the world to offer remote air traffic control. We made it happen – and together with our partner Saab, we continue to develop remote and digital air navigation services.

Tomorrow's way of conducting air navigation services is already here.

Today, airports and carriers face an increasingly complex set of challenges and we are committed to finding solutions to those challenges. We work closely with airports, airlines and international partners to optimize efficiency, capacity, safety and sustainability.

As experts within air traffic management, we are also a certified supplier of services such as: Aeronautical information, Flight inspection, Procedures and Airspace design and Technical consultancy services.

Our expertise in these areas is internationally recognized, and we have over 30 years of experience in 50 countries.

With smart solutions, we make it happen!
